

MICROSOFT BUSINESS INTELLIGENCE

MSBI

TRAINING COURSE SYLLABUS

A topic-complete practical path through SSIS, SSAS, and SSRS.

100% PRACTICAL CLASSES

SSIS

Integration & ETL

SSAS

Analytical services

SSRS

Report services

TRAINING DOCUMENT

Complete syllabus coverage, organized for practical classes.

COURSE ORIENTATION

How to use this syllabus

This is a training-course blueprint: each page exposes the actual topics to be covered in class.

01	SSIS Build integration and ETL fluency.	SSIS 12 syllabus sections	75
02	SSAS Build analytical models and explore them.	SSAS 2 syllabus sections	15
03	SSRS Build reports and reporting interactions.	SSRS 1 syllabus section	8
04	PROJECTS Apply the connected BI path.	PROJECTS Source project section	Full Stack

TRAINING-FIRST FORMAT

The course document shows the complete topic path—not just the headline technologies.

Use the section labels to move from foundations through advanced topics, then into the project thread.

Foundations and data flow

Introduction to SSIS, data warehousing, package architecture, ETL entities, and the data-flow model.

PACKAGE

Architecture & Tools

Architecture, ETL entities, and management tools.

FLOW

Data Flow Model

Sources, destinations, transformations, viewers.

PRACTICE

Execution Trace

Trace a record end-to-end through the package.

Introduction to SSIS

- SSIS Package Architecture Overview
- Introduction to SSIS & Data Warehouse
- Basic ETL Entities in SSIS
- Data and Management Tools

Introduction to Data Flow

- Data Flow Overview
- Data Sources
- Data Destinations
- Data Flow Transformations
- Data Viewers

CLASS FOCUS

Understand how a package is organized and how data moves through a flow.

The next modules build directly on this source → flow → destination model.

Sources, transformations, destinations

A complete component register for building and shaping a data flow.

DATA SOURCES

- Excel Source
- Flat File Source
- OLE DB Source
- XML Source

DATA FLOW DESTINATIONS

- Data Reader Destination
- Excel Destination
- Flat File Destination
- OLE DB Destination

DATA FLOW TRANSFORMATIONS

- | | | |
|------------------------------------|----------------------------------|--------------------------------------|
| • Aggregate Transformation | • Derived Column Transformation | • Percentage Sampling Transformation |
| • Audit Transformation | • Data Conversion Transformation | • Row Count Transformation |
| • Character Map Transformation | • Multicast Transformation | • Sort Transformation |
| • Conditional Split Transformation | • OLE DB Command Transformation | • Union All Transformation |
| • Copy Column Transformation | | |

SOURCE → TRANSFORM → DESTINATION

Advanced data flow

Matching, merging, dimensional preparation, reshaping, and text intelligence.

01

MATCH

- Lookup
- Merge
- Merge Join

02

DIMENSION

- Slowly Changing Dimension (SCD)

03

RESHAPE

- Pivot
- Export
- Import
- Unpivot

04

TEXT

- Term Extraction
- Term Lookup
- Fuzzy Lookup
- Fuzzy Grouping

COMPLETE ADVANCED REGISTER

- | | |

MATCH • MERGE • RESHAPE • ENRICH

Control flow and tasks

Orchestrate package execution through control flow, precedence constraints, and package tasks.

01 • CONTROL FLOW OVERVIEW

Package execution tree and precedence logic.

02 • PRECEDENCE CONSTRAINTS

Success, failure, completion, and expression branching.

03 • TASK EXECUTION

Data manipulation, bulk loads, file and system operations.

04 • PACKAGE PROCESSING

Trigger SSAS processing and cross-system tasks.

CONTROL FLOW TOPIC REGISTER

- Control Flow Overview
- Precedence Constraints
- Execute SQL Task
- Bulk Insert Task
- File System Task
- FTP Task
- Send Mail Task
- Data Flow Task
- Execute Package Task
- Execute Process Task
- Web Service Task
- Backup Database Task
- Analysis Services Processing Task

CLASS FOCUS

Connect control-flow decisions with the tasks that perform work inside an SSIS package.

Control Flow Overview • Precedence Constraints • Task execution • Package processing

Containers, variables, configurations, and logging

The topics that make package behavior reusable, configurable, diagnosable, and easier to manage.

ADVANCED CONTROL FLOW

For Loop Container: Standard counting loops.

For Each Loop Container: Multi-file & dataset enumeration.

Sequence Container: Grouping tasks & transaction boundaries.

VARIABLES AND CONFIGURATIONS

- Variables Overview
- Variable scope
- SSIS system variables
- Using variables in control flow
- Using variables in data flow
- Property expressions
- Configuration Overview
- Configuration options
- Configuration discipline

ERROR HANDLING AND LOGGING

- Control Flow: The On Error event handler
- Data Flow: Error data flow
- Built-in log providers (SQL, Text, XML, Event Log)

OPERATING PRINCIPLE

A training course must cover both the happy path and the behavior when a package needs to loop, change, fail, or log.

Deployment and package management

Finish the SSIS track with deployment options, service management, SSMS, and SQL Server Agent.

01

CONFIGURE

Configurations and deployment setup.

02

DEPLOY

Project & package deployment options.

03

MANAGE

The SSIS Service & SSMS management.

04

SCHEDULE

Scheduling packages with SQL Server Agent.

PACKAGE MANAGEMENT TOPICS

The SSIS Service • Managing packages with SQL Server Management Studio • Scheduling packages with SQL Server Agent

Configurations and deployment • Deployment options

Microsoft BI and SSAS foundations

Move from prepared data into data sources, data source views, cubes, tabular models, and Excel exploration.

DATA SOURCES

Create Data Sources

VIEWS

Create Data Source Views

MODEL

Cubes /
TabularModel

EXPLORE

View via Excel

SSAS FOUNDATION TOPICS

- Defining Microsoft Business Intelligence
- Viewing a Cube Using Excel
- Using SSAS in SSDT
- Understanding SSDT
- Creating Data Sources
- Creating Data Source Views
- Creating a multidimensional cube
- Creating a TabularModel

TRAINING THREAD

Define Microsoft Business Intelligence, work in SSDT, create the model, and view the result.

The analytical layer begins with the source and view definitions above.

Intermediate analytical modeling

Explicit topics for extending the model with KPIs, actions, aggregations, perspectives, translations, and multi-fact scenarios.

TOPIC	TRAINING FOCUS
KPI	Add a visible performance indicator.
Action	Add a business-facing action.
Aggregation	Create a summarized analytical path.
Creating Perspectives	Create focused views of the model.
Creating Translations	Add alternate labels and language context.
Working with Multiple Fact Tables	Work with multiple fact structures.
Using the Business Intelligence Wizard	Apply BI modeling patterns through the wizard.

SSAS INTERMEDIATE REGISTER

KPI • Action • Aggregation • Perspectives • Translations

Working with Multiple Fact Tables • Using the Business Intelligence Wizard

Report formats and report construction

Build the report layer with the complete set of basic formats and data-foundation topics in the source syllabus.

DATA SOURCE + DATASET

Build the report from its data foundation.

Construct data sources and datasets before designing visual components.

TABULAR

LIST

MATRIX

CHART

SSRS TOPIC REGISTER

- Tabular Reports
- List Reports
- Matrix Reports
- Chart Reports
- Parameterized Reports
- Drilldown Reports
- DrillThrough Reports
- Constructing data sources and Datasets

REPORTING THREAD

Construct data sources and datasets, then build reports that support scanning, comparison, parameters, and navigation.

Tabular • List • Matrix • Chart • Parameterized • Drilldown • DrillThrough

12 / COMPLETE REGISTER

Topic coverage at a glance

A compact cross-track index showing how the training syllabus moves from platform fundamentals to practical delivery.

MODULE	FOCUS	TOPICS	HIGHLIGHTS
SSIS 01	Foundations + data flow	9 topics	SSIS Architecture, Data Warehouse, ETL entities, tools...
SSIS 02	Sources + transformations	21 topics	Excel, Flat File, OLE DB, Multicast, Derived Column...
SSIS 03	Advanced data flow	12 topics	Lookup, Merge, SCD, Pivot, Fuzzy Lookup/Grouping...
SSIS 04	Control flow + tasks	13 topics	Execute SQL, Bulk Insert, File System, Precedence...
SSIS 05	Containers + resilience	15 topics	For Loop, ForEach Loop, Sequence, Variables, Logging...
SSIS 06	Deployment + management	5 topics	Configurations, SSIS Service, SSMS, SQL Agent...
SSAS	Foundations + intermediate	15 topics	Cubes, TabularModel, SSDT, KPIs, Perspectives, Translations...
SSRS	Basic reports	8 topics	Tabular, List, Matrix, Chart, Drilldown, Parameters...

SOURCE TOPICS RETAINED • TRUE DUPLICATES CONSOLIDATED • NO UNSUPPORTED CLAIMS ADDED

Use the full stack

The source syllabus closes with Projects. This page positions the supplied SSIS, SSAS, and SSRS topics as one connected training path.

01

SSIS

Integration topics

02

SSAS

Analytical topics

03

SSRS

Reporting topics

TRAINING THREAD

INTEGRATE

SSIS topics: sources, transformations, data flow, control flow, variables, logging, deployment.

MODEL

SSAS topics: data sources, views, cubes, tabular models, KPIs, actions, perspectives, and more.

REPORT

SSRS topics: tabular, list, matrix, chart, parameters, drilldown, drillthrough, data sources, datasets.

PROJECTS / SSIS → SSAS → SSRS

MSBI / TOPIC-COMPLETE TRAINING COURSE

Ready to build the stack.

SSIS for integration.

SSAS for analysis.

SSRS for reporting.
