LIVE ONLINE COURSE | MENTOR-LED | PORTFOLIO & CAREER SUPPORT

RPA & Agentic Automation

Become a job-ready automation developer. Master **UiPath**, **Power Automate**, and **agentic AI** in one comprehensive, live mentor-led programme.

45	33	15–25	₹19,999
DAYS	LIVE CLASSES	MINI PROJECTS	PROGRAMME FEE
Guided learning	Every topic named	Portfolio evidence	All inclusive

BUILT FOR NON-IT BACKGROUNDS & CAREER SWITCHERS

9 in 10 of our learners arrive from a non-IT background, a career gap, or a career switch.

You do not need a programming job, a technical degree, or recent coding practice to begin. The programme starts at the very first screen of the tool and moves forward one step at a time.

START RISK-FREE

The first 4 classes are free, with no commitment. Join the live classes and decide once you are satisfied.

Who it's for

- Freshers & final-year students
- Support, testing & non-dev professionals
- Career restarters & career-gap learners
- Anyone unsure — try the first 4 classes free

What you'll build

- 15–25 mini projects for your portfolio
- UiDemo, Directory Search & Report Mover builds
- 30–40 guided practice tasks
- One capstone automation you can explain

From the Studio screen to your first working bots.

Twelve classes that turn the tool into muscle memory — then straight into real business workflows.

FOUNDATION 01–06

Start with the building blocks.

01 UiPath Studio Explanation
The Studio interface, projects, panels, and activities.

02 Introduction to Variables
How values are stored and moved between activities.

03 Introduction to Arguments
Passing data between workflows to build reusable parts.

04 Selectors
How a bot reliably identifies an element on screen.

05 Selectors & Excel Automation
Targeting an application while working with spreadsheets.

06 Excel & Workbook Automation
Reading, writing, updating, and organising Excel data.

CORE AUTOMATION 07–12

Build useful automations across business applications.

07 Word Automation
Generating and updating business documents automatically.

08 Web Automation
Reliable interaction with browser-based applications.

09 Web Data Extraction
Turning web pages into structured, reusable business data.

10 Web Recording & Scraping
Faster, repeatable browser-based data workflows.

11 UiDemo Application Project
A guided end-to-end project connecting interaction, data and process.

12 Directory Search Scraper Project
A realistic scraping build, from input through output.

NEVER WRITTEN CODE BEFORE?

Class 01 starts with the Studio screen.

Where to click and what it does — explained in plain language first, then practised. Nothing technical is assumed, and every class builds on the one before it.

CAREER GAP OR SWITCHING FIELDS?

There is no coding test to clear.

You start from fundamentals, follow named practical classes, and build evidence as you go — so your next interview is about what you built, not what you studied years ago.

BY THE END OF PHASE 01

You can already do what employers ask about first: take a manual, repetitive task and turn it into a workflow that runs the same way every time.

Work with real business data — and make it robust.

The classes that separate a demo workflow from an automation people can trust.

DATA & WORKFLOW CONTROL 13–18

Clean inputs, controlled flow, readable output.

13 Variables Continued
Choosing the right data structure for the business case.

14 Programming & Control Flow
Conditions, loops, switches, and predictable decisions.

15 String Manipulation
Cleaning and transforming everyday business text.

16 Report Mover Bot
Moving, organising, and routing reports dynamically.

17 DateTime Operations
Dates, formats, and calculations that operations rely on.

18 Debugging & Logging
Breakpoints, output, and logs to find problems fast.

RELIABILITY & FRAMEWORKS 19–24

Build for repeatability, not just the happy path.

19 Exception Handling
Try/Catch/Finally and a deliberate failure strategy.

20 OS Automation
Files, folders, applications, and desktop processes.

21 DataTables
Tabular data inside workflows: filter, loop, process.

22 Excel Automation
Structured workbook actions and data-processing patterns.

23 REFramework
The enterprise transaction framework, explained clearly.

24 Assets & BOT Deployments
Reusable configuration, assets, and production readiness.

SWITCHING CAREERS? YOU ARE NOT BEHIND.

The second half is where non-IT learners usually start pulling ahead.

Data handling, exception strategy and frameworks are about **process thinking** — something people from support, operations, testing, accounts or admin already do every day. Here it simply gets applied to automation.

THE FRAMEWORK LENS

Input → transaction → exception → retry → output → deployment. This is the language of automation interviews.

Connect the ecosystem — then show what you built.

Cloud, desktop, and API automation, agentic concepts, and a portfolio you can present.

INTEGRATIONS & DELIVERY 25–29

Choose the right surface for the right problem.

25 Power Automate Cloud
Cloud workflows and wider business process connections.

26 Power Automate Desktop
Desktop automation patterns and where they fit best.

27 API Automation
Service connections that go beyond screen-only automation.

28 Regex & Integrations
Pattern matching and connected business scenarios.

29 Debugging & Control Flows
Troubleshooting and flow design in complex automations.

AGENTIC & PROJECT DELIVERY 30–33

Finish with real projects and a professional story.

30 Agentic Automation & Real-Time Projects
Agentic concepts applied to live, project-oriented work.

31 Microsoft PAD & Automation Anywhere
Interface-level exposure for multi-platform awareness.

32 Portfolio Track
Organise projects around problem, process, tools, logic and outcome.

33 Advanced Automation Readiness
Frameworks, cloud, integrations and communication for the interview.

YOUR PROJECTS BECOME YOUR PROOF

You do not need an IT job title to build IT evidence.

Each build is documented as **problem → process → tools → logic → testing → exception → outcome**. That is the story you tell in a portfolio, an interview, or an internal conversation about moving into automation work.

CAPSTONE CHECKPOINT

Present the problem, tool choice, workflow logic, testing approach, exception plan, and result — a project story you can explain in any interview.

Build
Turn class topics into working project evidence.

Test & explain
Review inputs, outputs and exceptions — then describe the design.

Show
Present the result in your portfolio or an interview.

What you leave with.

15–25 mini projects

Each documented as problem, process, tools, logic, testing, exceptions and outcome.

Career support

Mock interviews, resume preparation, LinkedIn and Naukri profile setup, job-application support.

Certification

Course-completion certification plus UiPath Academy guidance and progress tracking.

Taught by a working automation lead

Raghava Tadikonda

UiPath RPA Tech Lead · UiPath Community Trainer. **12+ years in IT**, **8+ years in RPA**. Trained **1,250+ learners** directly and reached **17,000+ students** through the Naan Mudhalvan programme.

PROGRAMME FEE

₹19,999

One price, everything included — no hidden add-ons.

FOR CAREER SWITCHERS & CAREER-GAP LEARNERS

Your switch is backed by evidence, not just a certificate.

Career support covers **mock interviews, resume preparation, LinkedIn and Naukri profile setup, and job-application support** — built around the projects you complete, so you can explain your skills even if your last job title had nothing to do with automation.

What's included

- ✓ All 33 live mentor-led classes
- ✓ Daily recordings for revision
- ✓ 30–40 guided tasks + 15–25 mini projects
- ✓ Portfolio direction & project documentation
- ✓ Interview prep and profile support
- ✓ UiPath Academy certification guidance

LIVE ONLINE · WEEKDAY MORNINGS

45 days · 33 classes · recordings included. New batches start regularly, so a fresh cohort is almost always about to begin.

01
Message us
Tell us your background and target role.

02
Confirm batch
We place you in the next available cohort.

03
Attend class 01
Live online, weekday mornings.

04
Decide by class 04
First four classes free, no commitment.
